Markdown Here

The only thing I customized is the CSS in [src/common/default.css](#).

Personal Markdown-Here Settings

- Syntax Highlighting CSS: Solarized Light
- TeX Mathematical Formulae Support: the following uses srcset and provide 3 images in 1x, 2x, 3x respectively:

```

```

Unfortunately, email doesn't seem to like srcset, so a good compromise will be just 2x:

```

```

The dpi is chosen such that the text in math match normal text when Latin Modern font is used. For the use of dpi, see <https://www.codecogs.com/pages/forums/pagegen.php?id=2914>

- Enabled Enable automatic header anchors.
- Disabled Enable GFM line breaks.
